

Implementing an Acoustic Pipe Inspection Program Using the
Sewer Line Rapid Assessment Tool
A Case Study on the City of Augusta

Alex Churchill – InfoSense
Jody Crabtree – Augusta
Kevin Joyner – Augusta

Agenda

- ▶ **Situation Overview**
- ▶ Acoustic Inspection Technology
- ▶ Implementation Case Study
- ▶ Summary

Augusta Utilities Overview

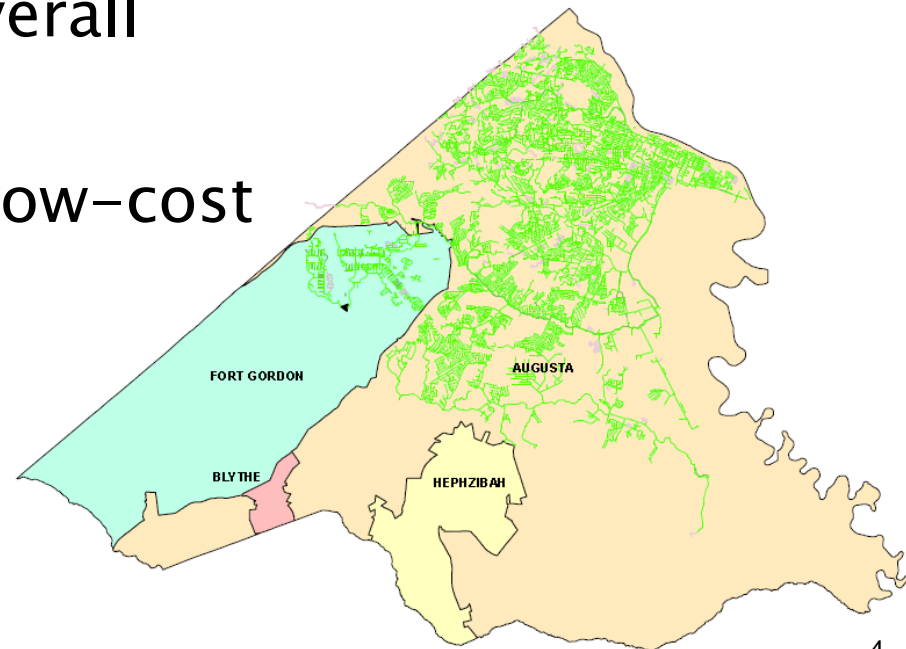

- Founded 1822
- Combined operations with Richmond County in 1996
- Population Served 190,000

- 1,040 miles of sewer pipe
- Covers 280 square miles
- Under GA EPD Consent Order

Reason for selecting the SL-RAT

- ▶ Needed to get “outside the box” to meet the requirements of the Consent Order
- ▶ Needed to get a handle on SSO performance
- ▶ Hence, needed to get an overall snapshot of their system
- ▶ SL-RAT provided a simple low-cost solution

- ▶ Situation Overview
- ▶ Acoustic Inspection Technology
- ▶ Implementation Case Study
- ▶ Summary

Sewer Line Inspection Methods

- ▶ Manhole Inspection

- ▶ *Acoustic*

- ▶ Zoom Camera

- ▶ Push Camera

- ▶ CCTV/Robotic Camera
- ▶ Pipe Wall Defect Scanners
- ▶ Pipe Profiling / Robotic Multi-Sensor

Active Acoustic Pipe Inspection Background

- ▶ Patented technology
- ▶ Gravity-fed sewer focus
- ▶ Winner 2012 WEF Innovative Technology Award

- ▶ Over 3.0M feet inspected
- ▶ Rapid assessment helps better focus cleaning and CCTV resources

Acoustic Inspection Technology

- ▶ How Does it Work?

Visual Comparison

CCTV Robot was Able to Pass Through Root Fibers

CCTV Robot was Not Able to Pass Through Obstruction

- ▶ Situation Overview
- ▶ Acoustic Inspection Technology
- ▶ Implementation Case Study
- ▶ Summary

How it was operationalized

- ▶ 2 SL-RAT's
- ▶ Managed by Asset Management
- ▶ Run with 2 person crews per SL-RAT
- ▶ Averaging ~7500 feet/8 hour day per crew
- ▶ Plan out inspection areas based on tax-maps
- ▶ Combining with manhole inspection program

Results So Far...

- ▶ >4,500 segments inspected in ~9 months of work
- ▶ >9,000 manholes located and inspected
- ▶ >1 MILLION Feet (197 miles)

6 Map Out in GIS

7 Close Out

- QA Cleaning
- Fix GIS Issues
- Update Records
- Schedule Next Inspection

- ▶ Situation Overview
- ▶ Acoustic Inspection Technology
- ▶ Implementation Case Study
- ▶ Summary

Key Learnings

1. The SL-RAT is simple, reliable, and easy to use
2. Keep up with the data – DAILY! Backlogs can get overwhelming
3. Forces discipline in visiting every manhole – identify issues, update GIS records, etc
4. Has focused efforts on the 39% of segments that are Poor or Fair
5. Requires teamwork to achieve full potential – cleaning crews, GIS, inspection crews – must all work together
6. Future plans include conducting post-cleaning QA
